
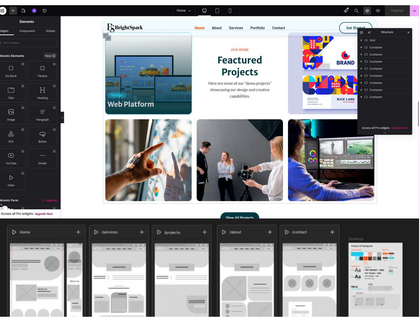
BrightSpark Creative Studio

Wordpress Web Page

This project showcases the development of the BrightSpark website using WordPress and Elementor.

The goal was to create a modern, clean, and responsive website optimized for performance and user experience.

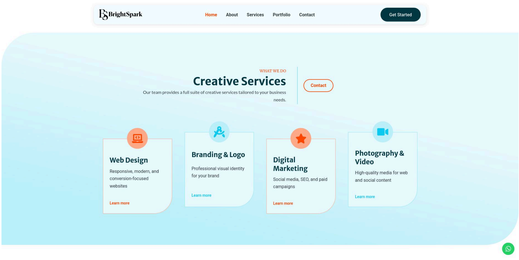


Design & Build Process

The website was built entirely with Elementor, allowing flexible layout design and fast iteration. Custom sections and components were structured to ensure clarity, visual hierarchy, and ease of navigation.

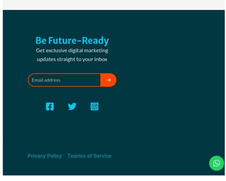
Custom CSS Enhancements

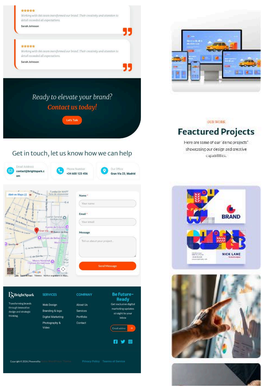
Additional styling was implemented using custom CSS, including a floating header menu that adjusts on scroll, improving usability and accessibility across the site.



Core Features

- Responsive design (desktop, tablet, mobile).
- Floating WhatsApp contact button.
- Custom contact form integration.
- Structured footer with navigation and contact info.

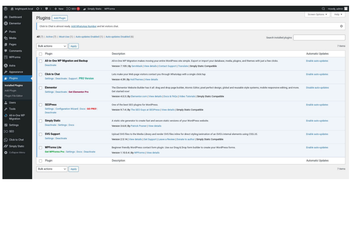




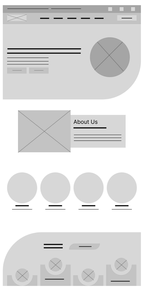
Plugins & Functionality

Essential plugins were integrated to enhance the site:

- SEO optimization plugin for search visibility.
- Backup system for data security.
- Performance and security tools.



The site is fully responsive and optimized to deliver a seamless experience across all devices, ensuring readability, fast load times, and intuitive interaction.



This project demonstrates practical skills in WordPress development, Elementor design, UI/UX structuring, and website optimization for real-world business use.
